

CyberWorkz.pdf

The dashboard has moved to this pdf. Here you will find everything you need in regards to crypto.

First off know that crypto is a scam, forget the noble idea that purists try to sell you, that isn't what's driving the market. This space like every other one has been co-opted by wicked charlatans. That being said, if you time your entrance and exits carefully you can make a few bucks.

The crypto market is essentially one big ponzi scheme, you don't want to get in too late and you don't want to be the one left holding the bag.

The market moves in cycles and follows bitcoin, so very simply, **buy low and sell high.**

If you are hearing or reading about something, it's too late. You need to be stocking up your bags during the bear markets in anticipation for the next bull run.

Im not gonna tell anyone what to buy, I will not be responsible for anyone losing money. I will say though that I have made most my money in Crypto on meme coins. Doge and Shib are the only ones I trust. Metaverse tokens made me a bag when they were poppin. Look at trending niches and the top coins in those categories. Not enough gains in bitcoin for me compared to altcoins but clearly the safest bet. I like to stay mostly in the top 100 coins. Im holding a few different coins but my main plays are with doge and shib for the time being.
